#### Our Vision

Our vision is to raise transformational leaders who would occupy every sector of the nation, and by extension Africa by 2050

# Publisher's Note

"Invest in Nigerian youths."

**D**espite the varying challenges currently experience in our dear nation, it is worthy of note that with the commitment and resilience of the citizenry, especially the youths our national growth and success will be inevitable.

This quarterly newsletter is aimed at sharing the impacts and collaborative work done by the TYIL Team and her volunteers.

We hope to change the perspective of the world and to invite more individuals to invest in our darling nation Nigeria.

We are ready to raise leaders who would occupy every sector of the nation by 2050 and those who would speak the truth, shun corrupt practices and stand for what is right at all time. We also aim at ensuring we increasingly solve social problems as those we have already begun.

TYIL is a growing organization aimed at raising transformation leaders and we hope reading through our achievements in 2019 would not only inspire you but will also spur you to action into taking daring steps towards the growth of our dear nation, Nigeria.

## **QUINSA SUPPORTED BY TYIL AND GROWWITHGOOGLE ORGANIZES A DIGITAL SKILL TRAINING PROGRAM FOR PERSONS WITH DISABILITIES**

**Q**UINSA organized a digital skill training focused on helping persons with disabilities enhance their digital skills to keep up with the rising social trend. The training which held on Friday, 5th April 2019 was supported by TYIL, growWithGoogle, Haptics & Other Partners and had 36 participants in attendance.

Participants who were students and entrepreneurs with physical challenges were enlightened on the opportunities in Digital Marketing, some of them had their businesses registered on googlemyBusiness while others were being enrolled into QUINSA Digital Skill training programs that includes Certificate courses, Experience-On-The-Job projects, Internship & Work Opportunities.

QUINSA hopes to do a close follow up on attendees and support them with resources that would enable them practice all they have been taught during the training exercise.

VOLUNTEER OF FIRST QUARTER IN 2019:

# Meet Dalmeida

## OLUWASEYI SAMUEL

**S**eyi is a graduate of Business administration from Yaba College of Technology and an associate member of Chartered Institute of Administration. He is passionate about helping the needy, playing musical instruments, acting and dancing.

He represented TYIL at the digital skill training organized for persons with disabilities by QUINSA where he volunteered actively in ensure the successful execution of the training.

In an interview, Seyi answers key questions on volunteering. He believes volunteering involves sacrifice to people that might not be privileged to repay in cash, words or kind. To him, volunteering means genuinely giving your time, money and heart without expecting anything in return. Seyi says volunteering has helped him to be a

better person generally by being more humane, considerate, compassionate and more enduring.

He encourages people to take time out of their busy schedules to volunteer and support organizations who committedly sacrifice their all to make a world a better place.

# DIGITAL TRANSFORMATION IS COMING, HOW AFRICA CAN BENEFIT.

By Oluwalana Segun

DIGITAL TRANSFORMATION IS COMING, HOW AFRICA CAN BENEFIT.

DIGITAL TRANSFORMATION IS A PROFOUNDLY BUSINESS ACCELERATING PHILOSOPHY THAT HARNESSSES THE GROWING POTENTIAL OF TECHNOLOGY, PEOPLE AND PROCESSES. IT CREATES A POSITIVE IMPACT THAT GOES FAR BEYOND ECONOMIC OBJECTIVES. IT CREATES DISRUPTIVE BUSINESS MODELS, IMPROVES SERVICE DELIVERY AND MAKES LIVES EASIER FOR ALL.

## WHAT IS DIGITAL TRANSFORMATION?

In simple terms, Digital transformation refers to the adoption of new-age technology to digitize analog business processes. It creates a digital connection with customers by disrupting conventional business models. Digital transformation empowers businesses to know their customers better and provides personalized services that are flawless and competitively priced. Mobile, Cloud, Internet of Things, Analytics & Connectivity are the building blocks that are ushering the digital transformation era. Wikipedia, lists Digital transformation as able to generate a revenue of 100 trillion dollars, the only other field able to generate this financial behemoth is asteroid mining, which Africa is unprepared to handle in all its complexity as no African country is capable of sending a man to space not to even imagine the moon, hence my recommendation would be for us to focus energy on the seemingly achievable and less expensive solution, Digital transformation.

## The 4 Pillar; Technologies of the Future

The right technologies foster growth and leadership opportunities, which are critical to building digitally native enterprises. IDC considers the 4 Pillar technologies as essential to success for businesses trying to navigate the digital economy. These four technologies will continue to dramatically expand capabilities; here's how.

### Big Data & Analytics

The amount of data available to collect and analyze to inform better decisions is already enormous and growing. IDC research shows that the amount of high value data worth analyzing will be times two in the year 2020. To thrive in the digital economy, Africa needs to view data as a strategic asset not only for internal decision support, but for generating revenue or for providing other desired value. In the digital economy, data is also digital capital.

### Cloud

As cloud adoption continues to expand, the very concept of what clouds are, and what they can do will change in important ways. Cloud services will become much more distributed, secure, industry specialized, and intelligent – which means leaders will need to stay on top of how this technology is tailored and deployed. Enterprises are quickly realizing that the cloud is required for digital natives and are investing heavily in response. By 2020, greater cloud spending for IT and cloud services will exceed \$500 billion globally.

### Mobility

Smartphones, tablets, and wearable technologies allow businesses to continuously interact with employees, customers, partners, and other stakeholders in new ways, creating customized digital experiences. Business leaders need to assess the most appropriate business processes and focus areas where they can create these customized experiences. This is a clear opportunity for strong IT leadership to pair with technology to create lasting Digital Transformation for an enterprise. After all, the mobile market will move 2.1 billion units globally by 2019; customers are using mobile technologies, which means businesses need to as well.

### Social

Social is the connective branch that better aligns businesses with stakeholders, in addition to aligning internal business units and lines of business. To become transformative in their use of social business, enterprises will need to solve for challenges to create openness and connectivity in their ecosystems in order to preserve alignment and deliver optimal experiences expected by customers.

IDC predicts that by 2020, 40% of e-commerce will be enabled or influenced by a consumer's social network in an automated way.

Digital Transformation is turning the tables across industries creating a shuffle in the top players. Companies like Facebook, Airbnb, Uber & Amazon came into existence in a short span of time. But, today they are market leaders & disruptors in their own domains.

#### The Mortar: Innovation Accelerators

Innovation Accelerators, as defined by IDC, are the next wave of 3rd Platform technologies critical to business transformation. Capturing growth in the rapidly scaling digital marketplace will require maximizing on these key growth drivers:

#### Cognitive/Artificial Intelligence (AI)

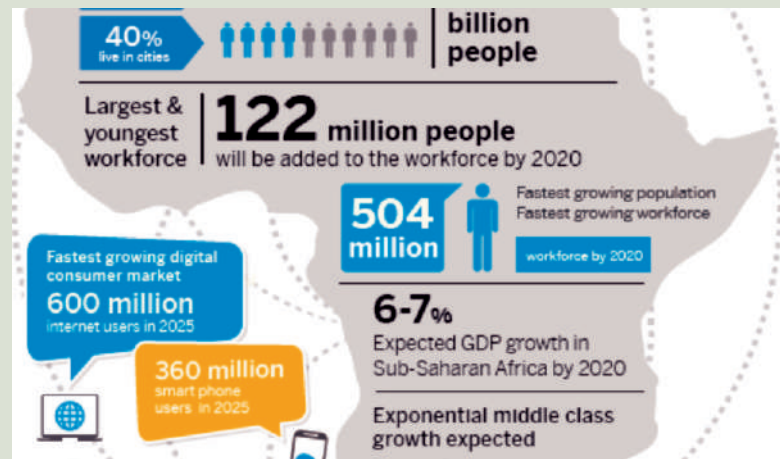

Many companies have already started adding cognitive/AI components and functionality to their products to provide predictions, assistance, recommendations, and guidance on tasks within the software. IDC predicts that either machine learning analytic techniques or much broader cognitive/ AI functionality will be included in upcoming versions of most enterprise software, including all business analytics solutions.

This functionality isn't just for data scientists, but will be included for customer experience, supply chain, collaboration, human resources, or other applications, accelerating transformation across the entire business. Organizations should be examining their current business processes to determine where cognitive/AI technologies will be deployed to achieve the best business outcomes. One place to start may be with workforce; by 2019, 75% of workers whose daily tasks involve the use of enterprise applications will have access to intelligent personal assistants to augment their skills and expertise.

#### The Internet of Things (IoT)

The Internet of Things continues to gain momentum in organizations looking to foster DX. While many business leaders recognize the benefits that connected devices can bring to their operations to enhance experiences for consumers and for employees, questions around the security of both the devices and the data that they gather, and use give them pause. As a result, by 2019, more than 75% of IoT device manufacturers will improve their security and privacy capabilities, making them more trustworthy partners for technology buyers.

Business leaders should conduct a risk assessment to identify the perceived risks associated with data collection and IoT device activity. Measure the risks against the opportunity for an attacker to thwart established controls for data confidentiality, integrity, and availability and/or abuse device components to cause a potential public safety hazard. It's up to business leaders to guide this process and to encourage a company culture that embraces the transformative elements that IoT can bring.

#### Next Generation Security

Security is a pivotal topic for all organizations. The sheer amount of data collected and used in the course of business today, and the increasing number of high-profile security breaches reported globally, offer multiple areas of concern. How will digital natives use next generation security fight back? It starts with planning and choosing the right partners. Enterprises can benefit from professional services providers and cybersecurity vendors that understand the technology and can advise how to use it for DX. Many of these partners will also use other Innovation Accelerators to strengthen security offerings.

#### Robotics

New developments in robotics will have the potential to disrupt the business ecosystem for all industries and companies' IT functions. Robotics is an area that will shape not only consumer-related decisions in the digital economy, but employee-related ones too. By 2020, robotics growth will accelerate the talent race, leaving 35% of robotics-related jobs vacant, while the average salary for knowledge-based workers will increase by at least 60%. In order to make robotics an effective growth accelerator, business leaders should monitor the development of technology trends and constantly review the connectivity and bandwidth infrastructure required by robots for real-time access to cloud-based analytics, intelligence, and new task skills. They should also keep an eye on how governments and markets will shape the ways enterprises deploy robots, as government regulations and public sentiment will try to preserve jobs and reinforce standards around privacy and safety in robotics usage.

#### Augmented and Virtual Reality (AR/VR)

AR/VR experiences have been a mainstay of science-fiction, but this technology is beginning to make a significant impact on the way businesses operate. IDC predicts that three out of 10 consumer-facing Fortune 5000 companies will experiment with AR or VR as part of their marketing efforts in 2017. And by 2019, 10% of all web-based meetings will include an AR component, driving disruption of the \$3 billion web conferencing market.

### 3D Printing

3D printing has grown from an experimental opportunity to a technology that can change the way IT and businesses operate. IDC predicts that by 2018, 3D printing will be a mainstream technology market with new participation from large and established document printing, contract manufacturing, and electronics vendors. Use cases and applications will vary widely from industry to industry, but in the digital economy, companies should begin thinking now about how to best use this growth driver to advance their own interests. For example, by 2019, 25% of the top 2,000 global manufacturers will explore 3D print-capable smart robots to increase worker safety and reduce repair time by 30% in highly complex environments in order to operate more efficiently and safely, providing better service overall. Africa has more people aged under 20 than anywhere in the world and the continent's population is set to double to two billion by 2050.

### WHERE DOES AFRICA COME IN?

Africa is currently behind the world, in everything you can think of, apart from poverty, and this is going to get worse for Africa as the world advances and leaves Africa behind. What Africa has to do is to stand as a bridge between the future and the present by jumping on the coming wave of digital transformation by being an outsourcing pool of talent for the world on issues related to digital transformation.

Africa has a surging population and will continue to grow geometrically in the coming decades, and this would put strain on the continents already over exploited resources by foreign countries. The coming population explosion will either be a curse or a blessing.

### AFRICA'S POPULATION, A CURSE OR A BLESSING?

Africa has more people aged under 20 than anywhere in the world and the continent's population is set to double to two billion by 2050.

Africa is plagued with, extreme poverty, high unemployment rate, massive corruption, ethnic violence and extensive brain drain. This is due to the fact that Africa was left behind in the third industrial revolution, the coming of the computers, and this has made Africa unable to grapple with the fast-paced reality called modernization, Africa seems to be a staggering drunk amidst a clear-eyed church congregation.

What Africa can do to correct this unnecessary problem is to focus on training its young population which is both an asset and a blessing on digital transformation topics such as data science, analytics, digital marketing, cloud technology, but most especially data science as data is king in the coming future, to do this we will have to include it in our curriculum in every tertiary institution and make it free to learn this subjects.

If we can successfully teach our young population the art of

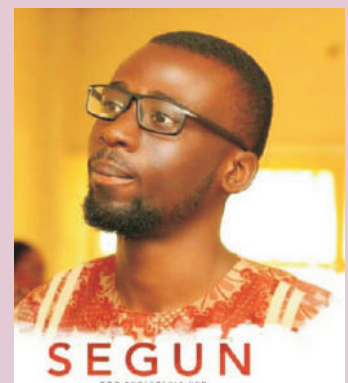

data science, and other fields of digital transformation, we can be sure to generate revenue from foreign direct investment as the world faces a shortage of well-trained data scientists and digital transformation experts. The world will be willing to outsource this jobs and focus on their core competencies, we should pick a leaf from Bangalore in India, as it is now a global center for anything related to IT, and Indians now have a reputation for being great coders and they benefit from this status by getting jobs in the biggest software companies (FAANG) Facebook, Amazon, Apple, Netflix, Google, and send their salaries home, apart from this , many technology companies in the USA outsource projects to India.

Every country that has had an economic transformation in the past fifty years has had a massive foreign direct investment, and banked on making it bigger annually, Africa needs to do the same with DT.

Digital transformation is the only field Africa will be able to challenge the world and win, due to its low cost of entry in relation to other fields; For Africa to succeed, it needs to just train its young population in thinking digitally and globally.

There will need to be a partnership between the private and public sector to make this dream a reality for Africa, and Africans, the government would need to drop favorable policies, while the private sector will spend resources and infrastructure to maintain the digital transformation eco system, knowing they are backed by the government policies and also knowing they are going to make profit from developing and outsourcing local talents on a global market, while also being sexily alluded as being the leaders of Africa's future digital transformation.

I will end this article, with the words of Bayo Adeganmbi, the Chief Transformation Officer of MTN, and a globally recognized expert on Digital transformation who says "It will be a secondary slavery if we miss this next wave of business revolution and lose out on the opportunity to build the local capacity that is required for the evolving global shifts"

## TYIL ORGANIZES TEENS AND YOUTHS IN LEADERSHIP TRAINING 2019

In pursuit of her core goal of raising transformational leaders who would occupy every sector of the nation by 2050, The TYIL team started a 10 meeting leadership program for teenagers and youths from age 16 to 30.

This program is focused on empowering young individuals to discover, develop and unleash their leadership potentials and upon graduation, participants are expected to have participated in lectures, class activities and group project.

Successful participants who graduate from the training program would thereafter become TYIL fellows and would become registered volunteers of TYIL, hence affording them the magnanimous opportunity to engage in other self-development and leadership courses partially sponsored by TYIL.

TYIL hopes to come up with more ideas that would further push and shout out the rights of PWDs worldwide, also to help PWDs adapt to socio-economic demands thus equipping them for access to social and economic benefit.

## TYIL ORGANIZES A 28DAY ADVOCACY AGAINST STIGMATIZATION OF PERSONS WITH DISABILITIES

Even though, the world claims to have accepted people with disabilities (PWDs), there are yet shards and elementary pieces of discrimination or more Politely put “incomplete acceptance”. PWDs are yet to find themselves in society's socio-equality so to say. In essence, despite everyone's claim to accept PWDs, 90% if the world's PWDs are still unemployed, unrecognized mostly homeless or simple neglected.

As much as we would like to think the 21<sup>st</sup> century mind is now open to the limitless possibilities that abound within every sphere, the opportunities for these “possibilities” hasn't been appropriately accorded to these PWDs.

Despite the fact that being “the dyslexic painter who literally set the standards for the world's high class painter” as Leonardo Da Vinci says, Stevie wonder (The blind multiple Grammy award winner and million dollar record musician) and Stephen Hacking (The Amyotrophic lateral sclerosis, legendary Physicist and one of the world's most brilliant scientific mind) have graced this planet with their intellects, yet the world still seems oblivious to many hidden potentials in this intellectual minefield of Disables.

This bogus is what llead has been tackling since late 2018, identifying and unveiling these people (PWDs) who are simply no different from any other persons who deserve to be given an opportunity at being the best of themselves and not be reduced to the already obsolete degenerated “status quo”.

The first TYIL project of the year 2019 soured on metaphorical and literals wings in February, it was themed the 28-day Social Advocacy whose job was only to promote the rights of PWDs and fight savagely the stigmatization of PWDs

Volunteers participated by wearing printed vests and took photographs as models for the online invasion. Pictures were taken and posted every day on social media and adorned with catchy captions that expresses TYIL's motive which includes TYIL's optimistic belief in what PWDs could do to become better for themselves and Nigeria. TYIL equally commended the President of the federal Government of Nigeria, Mohammed Buhari, for the giant stride of passing the discrimination against disability (prohibition) act 2018 and encouraged that provision and facilitation of the act be made TYIL hopes to come up with more ideas that would further push and shout out the rights of PWDs worldwide, also to help PWDs adapt to socio-economic demands thus equipping them for access to social and economic benefit.

# VOICE OF TEMILADE

By Abiola Oluwatobi

I wished she could see what I felt for her in my eyes. I wished she could see how I longed to hold her in my embrace till forever. I wished she could see the spark in my eyes every time she smiled, revealing her gap teeth and dimples like that of my Mum.

"I love you, Temilade" I believe in expression. Ever since I found myself in love with Temilade, I never missed an opportunity to express my true feelings to her.

Temilade and I met at Cold stone in ICM. She and her sister had gone to shop, she was on shades when I approached their table. It was love at first sight. She looked flawless and perfect. I sat with them and politely asked if she could take off the sunshade so I could properly behold the angel before me. Tomi replied in the negative but Temilade got off her shades, not minding her sister. She was blind. It was not what I expected but I got attracted to her even more. We exchanged contacts and we became good friends till we knew it had to move to the next level and we started thinking of a future together. I needed not be told that it was time to have my woman to myself in holy matrimony, but I was always faced with a fear. Aside that, Temilade was from a humble background which my parents will see as an insult to their personality, they wouldn't support me getting

married to a blind lady.

No one understood what I felt for Temi. But whatever it was, I didn't want to recover. I knew Temi was all I wanted and needed in a woman. She was all I needed to scale through every huddle in life. She was my vibe to achieve more. I didn't see myself depending on my parents' wealth. I wanted to be able to stand alone without falling back on them for financial support.

"Mum, Dad, I want to inform you that I have a woman in my life" I started calculating how best to make them accept the woman I love.

Mum's face suddenly became brighter. She smiled at me.

"Ok, who is the lucky lady that is about to become my daughter in law?" Mum giggled. The smile on my face faded.

"Temilade. Her name is Temilade".

Mum's smiled brighter, revealing her gap teeth and dimples.

"What school did she graduate from and what does she do for a living? Who is her father?"

"Mum, I'll bring her here tomorrow. You'll find out then" Mum's smile disappeared. I read curiosity in her expression. I ran to my room, locked the door and threw myself on the bed. "Temilade doesn't deserve to be blind. She is full of love and has a large heart. Why Temilade?" I rolled

on the bed with my eyes shut. I hated life for being unfair to the only woman I love.

The next day was Saturday. I had called Temilade's sister the previous night to get her sister ready for today as she'll be meeting my parents.

I pulled the car to a stop in front of Temilade's house. I smiled while dialing Tomi's line. It rang but she didn't pick. I dialed again.

"Tadahhh! We are here" Tomi announced, tapping the car. I unlocked the door and she helped Temi sit beside me. While Tomi opened the back door and stepped in.

"But you didn't inform me you'll be coming with us, Tomi" I asked.

"I insisted she follows me" Temi responded

"Alright, it's fine. By the way, you look stunning" I squeezed her hand in mine. She smiled. There was a chemistry. I dropped her hand hurriedly before I cross the line. Konji has not been merciful lately. Especially whenever I'm with Temilade. I turned on the ignition and zoomed en route Senator Banjo's Estate.

"My son, you have brought our wife, right? Your Dad and I will be there in split seconds" Mummy responded from the master bedroom as soon as I announced my presence.

"Make yourself comfortable. I'll go get you something chill from the kitchen while the Cook gets the meal ready"

"Thanks, my love" Temilade responded as she and Tomi sat on a two-seater couch.

"My daughter, you are beautiful" was all I kept on

hearing when I stepped into to the living room with a tray of fruit drink and glass cups. I was shocked to find Tomi in Mum's embrace. Confusion was written all over Tomi's face.

"Mum, you are hugging the wrong person. That's my fiancée's sister"

"Ehen, didn't you say it was your fiancée you were bringing home?"

"Yes, that's her. Temilade Israel. The love of my life" I pointed at Temilade. I moved closer to

hold her hand. Mum's smile disappeared and all I could see was disappointment written all over her face.

"Kola ti pa mi (Kola has killed me)!" She sat on the floor sobbing with her two hands on her head. She shook her legs and body as she reiterates "omo yi ti pami" (this child has killed me).

"Why the noise, Mummy Kola? What is happening here?" Daddy joined the scene Mum created even if he knows Mummy is dramatic in nature. I couldn't look at my Dad's face.

I bowed my head and turned it in Temilade's direction. Her face was soaked with tears. Tomi's hand was on Temi's back. She was consoling her sister. I felt a liquid substance running down my cheeks. I sobbed unknowingly and painfully. I just made my heartthrob cry. I bit my lips in regret for bringing Temilade to my parents in the first place.

"Your only child has brought a blind lady home as wife!" Mum replied Dad, pointing at Temilade. "Baba Kola, your son has disgraced us. He has brought shame to the Banjo's family." She stood up and grabbed me by my trousers belt. "You must kill me today! Kill me o!" I tried to let go but couldn't. The mucus that had flowed from my nose to my jaw dripped on mum's hand. I maintained silence. I felt so weak for not saving Temi by preventing this whole dramatic occurrence.

"Mama Kola, be calm. Let's talk about this"

“Talk about what, Baba Kola? You were not here to witness your son calling a blind girl the love of his life! Ahhh! Instablog9ja will carry it, Media houses too will make a head line out of this! And before you know it you will see it on the news that Senator Banjo's only child got married to a blind girl! Ahhh, omo yi ti ba aye mi je! (this child has destroyed my life) she threw herself in the air and landed on the hard tiles.

I managed to get Temi and her sister out of the house that day. I apologized to her and made her understand that what I feel for her is undying. Though she tried to plead with me to be on the good side of my parents even if that will cost us our relationship, but I would rather be disowned by Senator Banjo than to live without Temilade.

I packed my things out of the house and lodged in a hotel. I already put a call through to a real estate agent for an apartment and he promised to get back to me as soon as he could.

My phone rang very early the next morning and it was Tomi.

“Kola! Temilade!” is all she said.

“what happened to Temilade”?

“Temi! Poison!”

As soon as I heard this, I ended the call, picked my car key and zoomed off to Temilade's house.

I was stunned to meet crowd in their compound.

“Temilade drank insecticide” Tomi ran into my embrace, crying profusely. My heart skipped a bit. Was Temilade dead? No! That can't happen.

“What happened? Temilade is not dead, right?” I inquired, welcoming the mucus from her nose to my shoulder.

“I was washing this evening when she told me to give her insecticide, that she was being bitten by mosquito. Since the insecticide has a welcoming scent that can't harm her. I decided to bring it for her not knowing she wanted to spray it in her mouth. I entered the room and saw her groaning in pain. She held her stomach and was rolling on the floor. I tried to find out what the problem was, and she told me she continuously sprayed the insecticide in her mouth because she doesn't want to come between you and your parents, and neither can she live without you”. Tomi cried aloud, throwing herself in the air. I caught her and we landed on the ground.

So, I have lost the only lady I love because of my parent's unfair discrimination against Persons with Disabilities. Where will I start from? Can I ever heal? Can I ever forgive myself?

I thought of the future I had fantasized with Temilade. Our chance of being together forever has just been crumbled. I hated myself for allowing my parents despise the woman I love because of she was blind. Maybe I should have defended the love of my life.

Maybe if I had reassured Temilade of what I truly feel for her and told her nothing was ever going to come between us right there and then in Senator Banjo's living room or maybe if I had held her in my embrace instead of feeling pity for her and crying from my mum's drama, she would not have attempted suicide. Maybe she would have been convinced enough that we can scale through. Maybe she would have lived.

I never returned home. I never got married. I channeled my strength to my career and sponsored Temilade's siblings' education to PhD level. I still send money to her parents. I have traveled to over 32 countries and everywhere I go, I preach against 'Discrimination against Persons with Disability'. I have a Non-governmental Organization to that effect in Temilade's name; Voice of Temilade.

The NGO has won over 100 awards both home and abroad. The vision and mission of the NGO has been achieved to a considerable level. We have been able to enlighten people that everyone deserves to be treated equally irrespective of their physical or mental challenge.

I have forgiven my parents. I saw my Mum telling people on Social Media to be fair with persons with disability because every child is the same. I smiled. It was evident she had learnt from her mistake. My Dad still speaks to me over the phone and each time he calls, he asks for my forgiveness as he now knows better. He was in tears when I told him last year that I have forgiven both him and mum.

My 55th birthday is tomorrow, and I intend to paint the world with “No Discrimination Against Persons with Disability” yet again with Voice of Temilade Team.
